What Difference Does a Video Network Have on My Conference?

Your time is valuable, so is the time of your participants. Therefore it is important that the video conferencing supplier you partner with provides the highest quality of network options to keep your conference connected and communication flowing. That's why InterCall teamed up with SAVVIS in an effort to provide our customers with not only superior video conferencing solutions but the highest quality in video networking. Depending on your network requirements, you can rest assure that InterCall will provide you with a network plan that is superior within the industry and one that works well within your budget.

What Network Plan is Right for My Business?

Now you can choose a network plan that suits your business and financial needs. As an InterCall customer, you can choose between two types of network plans: InterCall Video Connect IP, an alternative video network plan that provides high-quality conferencing with guaranteed service levels at a lower cost than standard high-speed (business class) networks, and InterCall Video Intelligent IP, the plan that is best suited for mission-critical video overlay networks which require 100% guaranteed service and access. Whatever your requirements, InterCall can assist you in providing the proper network plan – one that will deliver a quality connection time after time.

VIDEO CONNECT IP

InterCall Video Connect IP offers two low-cost video network options (Connect IP256 and Connect IP512) that are perfect for customers that need basic network solutions with guaranteed SLAs. Through Connect IP256 and Connect IP512 you receive high-quality IP video network connectivity for your InterCall Video Conferencing point-to-point and multipoint calls, while saving money since your video traffic is carried over Synchronous DSL.

VIDEO INTELLIGENT IP

With the Intelligent IP video network solution, state of the art segregated PVC traffic ensures your video does not compete with other Internet or intra-net traffic. We have configured the network so that Intra-VPN video, InterCall Video Reservations scheduling/bridging access, secure off-net calls using InterCall bridging services, and IP-ISDN Gateway services are the only services that can be utilized via this segregated network (overlay network can be configured for overflow data traffic when not in use by video conferencing access. Extra charges and equipment required)

Unparalleled to any other network plan, InterCall IP offers SLA⁴ video transport and provides improved quality of service over the entire range of your video experience.

InterCall Video Conferencing Network Plans

	CONNECT IP		INTELLIGENT IP
	Connect IP256	Connect IP512	
Endpoint Connections	1 Recommended	1 Recommended	Unlimited ³
In-Network Calls	Unlimited	Unlimited	Unlimited
IP to ISDN Gateway Calls	Unlimited ²	Unlimited ²	Unlimited ²
Gateway Charge ¹	Per Site/Per Minute, longest connection	Per Site/Per Minute, longest connection	Per Site/Per Minute, longest connection
Router, CPE	Included	Included	CPE provided by SAVVIS
Multipoint Bridging	Per Site/Per Minute	Per Site/Per Minute	Per Site/Per Minute

Still Need to Connect to Legacy ISDN Endpoints?

Use InterCall Video Reservation, the easy-to-use reservations system that gives you the ability to connect point-to-point and multipoint IP to IP or mixed IP to ISDN¹ video calls. Just make sure that your equipment is ready for the call – InterCall does the rest.

Let InterCall and SAVVIS provide you with reliable video conferencing network solutions.

To get in touch with an InterCall sales representative in your area, please visit www.intercall.com/contact and enter your area code or call 1-800-603-9402.

¹ ISDN per-minute long distance charges apply.

² Gateway point-to-point calls run through InterCall multipoint bridge. Bridging charges apply.

³ Connections limited only by your bandwidth when combined with video call speed.

⁴ All Business Class is customized to particular video need. SLA available upon request.

InterCall Video Connect-IP video network is only available in the entire US. InterCall Video Intelligent IP video network solutions are available in select global markets.
